

**Dr. Aurélien Debelle** earned his Ph.D. in Materials Science at University of Poitiers (France) in 2005. Since 2007, he is an *Assistant Lecturer in Materials Science at Université Paris-Sud* (CSNSM, CNRS/IN2P3, Orsay, France). His research focuses on both fundamental and applied aspects of radiation effects in materials, which includes ceramic oxides and carbides for nuclear energy and microelectronics applications. He has a solid expertise in advanced X-ray techniques for studying microstructural modifications under ion irradiation. He has published more than 65 publications in international scientific journals.
